

BGACDC AND THE ARKANSAS DELTA GOING GREEN PROJECT

BGACDC has joined the fight to reduce food insecurity through the Arkansas Delta Going Green Project. The project, led by VISTA Summer Associates, will provide access to fresh produce in the Marvell area and advance agricultural education to combat hunger. As a result, local community members can join in efforts to grow fruits and vegetables and purchase affordable food. Program staff will train community members, including youth, on preparing healthy food and adding healthy food into everyday living.

To achieve these goals, VISTA members and community volunteers will prioritize youth development needs, research innovative agriculture programs and plan appropriate agricultural support throughout the Marvell community. The Green Project and its harvest members will coordinate work experience and career exposure opportunities for youth and other community volunteers.

The goal is to reach 25 families to ensure everyone has sustainable access to affordable and healthy food. Join BGACDC in the fight against food insecurity and hunger. Let us make it a priority to TEACH each other about agriculture and its importance to the community!
